

EOR: End of Road (where the real trail begins)

KHTO: Kalani Highlands turn-off

WIRT: Wai`alae Iki Ridge Trail access point (also lunch stop for Kalani Highlands)

It looks like the Magellan Explorist 500 did OK until losing the third dimension in the last valley on the Kalani Highlands loop. However, it was supposed to be 2.5 mi to the summit, as Kelvin recorded, while I only got 2.2:

My reading for the whole hike, including Kalani Highlands on the way back (as seen on map above), was only 4.9 miles.
